

- Developed a Swift-based iOS app that provides real-time stock price updates, historical data visualization, and profit/loss tracking. Leveraged programmatic UI design to ensure flexibility and control over the app's visual presentation. Integrated
- Firebase for secure user authentication, enabling seamless login and signup. Implemented interactive line charts for
- historical stock price analysis, empowering users to make informed investment decisions. This project showcases strong
- API integration, JSON parsing, and a user-centered approach to financial data presentation.
- Please use .xcworkspace extension file to open the project.
